Developer Achievements

Serene Surin Co.,Ltd. received the prestige award of Best Boutique Developer in Phuket 2020, by DOT Property Thailand Awards.

Serene Condominium also received verification of the project's main concept, Eco friendly and Sustainable, when DOT Property Thailand Awards awarded us with the Best Sustainable Eco Design awards on the same ceremony.

The achievements continued onto the next awards, where Serene Condominium also received the Highly Commended Best Green Development by Thailand Property Awards 2020.

We are proud to get our Green, Sustainable and Eco friendly philosophy confirmed and authenticated by all the major awards in Thailand.

ECO FRIENDLY CONCEPT

WHY WE CARE AND YOU SHOULD TOO

OUR CONCEPT IS BASED ON 4 MAIN DIRECTIONS

THE SUSTAINABLE SITE

WATER EFFICIENCY

ENERGY AND
ATMOSPHERE

MATERIAL AND
RESOURCES

HOW WE MAKE A DIFFERENCE

- For Every Tree we cut down, direct or indirect, we will plant 2 new
- For every 1,000,000 THB you buy, we will donate 1,000 THB to an environmental foundation on your behalf
- We cover as many parts of the building as we can with leaf plants and trees in order to cool down the building and reduce our carbon footprint
- We reject the usage of non-recycled plastic
- We use material with minimum maintenance which does not require chemicals
- We balance the usage of recycled, eco-friendly and highly durable materials
- Solar panels on the roof to supply the energy for some of the common area is considered if efficient
- We use new and innovative technology that helps clean the environment

WHY WE CARE

- More than 20% of the world's oxygen is produced in the Amazon Rainforest
- Every 1.2 Seconds, mankind destroys a forest area the size of a football field
- 80% of the world's forests are already destroyed
- 15% of all greenhouse gas emissions are the result of deforestation

WHY YOU SHOULD CARE

- A mature tree absorbs 22 kg ~ 48 lbs of CO2 from the air and turn it into Oxygen
- This tree will absorb as much carbon in a year as an average car produces while driving 42,000 km ~ 26,000 miles
- That same tree can provide enough oxygen for 2-6 people per year
- Trees filter and provides improved water quality by slow filtering rain fall
- Trees and leaves also helps cooling down buildings 10-15 Degrees C
- In 1 day, a large tree can lift up to 378 liters of water out of the ground and discharge it into the air and thereby lower the air temperature
- Trees results in a 30% reduced aircon saves energy cost
- Trees increases property value with 12-27%
- Trees are also shown to lower stress, reduce blood pressure and reduce anxiety

THE SUSTAINABLE SITE

Site and sustainability

The Site and Location

- ✓ The Site is an open area without forest or any big trees to minimize the impact on the Nature during the Construction
- ✓ The Site is in the Yellow Zone, meaning less crowded and less dense habitation and allows for Condominium
- ✓ Surrounding Greenery is left untouched

Making the Building Green(er)

- ✓ In the area surrounding the project we have over 30% of Green space
- ✓ A Large Part of the Roof top is Green to absorb the heat and cool the building down
- ✓ The outside wall of the buildings are covered with climbing Ivy and plants hanging of the balconies, heat-isolating the Building which reduces the need for air conditioning while giving a green and calm esthetics.
- ✓ Preserving the existing greenery growing around the building and adding some more ensures fresher air, lower temperatures and the surrounding area remains lush

Adding more green to the building

From the core design we added greenery, even on the insides with vertical gardens and pots with plans in the common areas of the buildings

This works as natural air fresheners, cleaning the air and also reduce heat

A man-made waterfall welcomes you to the project This cools down the water and the surrounding area, making the air more fresh

It also look amazing with moving water and the sound of water has a proven therapeutic and calming effect, clearing the mind and the air

WATER EFFICIENCY

Water resource management

Collecting Rain Water (Rain harvesting)

Used as a replacement for tap water for example:

- Watering of plants throughout the project
- Refilling the project's Waterfall and Pools
- Washing common areas and similar
- Flushing water for the toilets

Gray water

Relatively clean waste water, reused for the best benefit

- Shower waste water
- Sink waste water
- Washing waste water

Funneled through filters and cleaned it is collected in another tank and pumped back to be reused in various parts as suitable

ENERGY AND ATMOSPHERE

Energy Saving and Ambience

☑ Colored glass to reflect and absorb light (Heat Absorbing Glass)

Reduces the heat from the sun that pass through it absorb and deflect around (35%-50%) of the heat from the sun that hits the surface thus contributing to reducing the cooling load of the air conditions and saving energy
*depending on coating and thickness

☑ Sheer curtains and Blackout Curtains to reduce heat

☑ T5 and LED bulbs throughout, for highest efficiency

Long-lasting, non-toxic, eco-friendly, safe, eye care, energy saving, money saving

Advantages of LED bulbs

1. up to 90% energy saving
60-80% energy efficiency over other regular bulbs
2. Long Service Lifespan
Average LED lasts 50,000-100,000 hours
3. Environmental friendly
No toxic compounds or elements (Mercury free) and are 100% recyclable
4. Ultra low UV Emission
Majority of the light is in the visible spectrum
Virtually zero infrared or ultraviolet Emissions
5. Low radiated heat
95% of the energy is converted to light and only 5% is wasted as heat.
6. High Reliability
Instant On and Off and frequent switching doesn't cause degradation in the device

☑ Solar panels on the roof

Produces renewable energy for efficient use in the buildings and covers up to 30% of the total peak energy consumption.

All electricity used will firstly consume the Solar generated power and use the PEA grid if required

☑ Charging stations for Electric Cars Helping people to be Eco-friendly

Reduces Fossil fuel consumptions and reduces global warming
Helps to Reduce air pollution and less noise

- Installed by the Lobby parking
- Installed in the underground parking EV zones for easy and convenient use
- Sensors for light and corridors

MATERIAL AND RESOURCES

☑ Selection of materials and construction resources to be Environmentally friendly

Natural stone veneer on most of the exterior walls
Looks beautiful, heat isolation and durable

Stone Surface are constructed from 100% natural stone slices, precision cut and holds all properties of the natural stone
It is water, heat and sunlight resistant and easy maintenance that requires no chemicals

☑ The ceiling of the common areas uses GREEN BOARD

Recycled material, shredded into small pieces and then pressed together using first hot and then cold press
The process is eco friendly and use no chemicals or glue

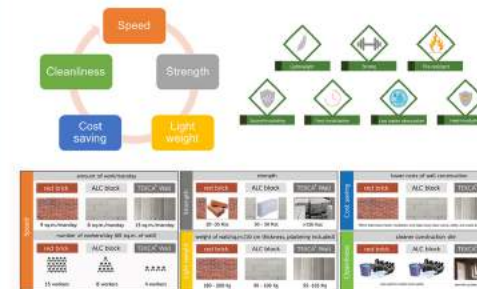

Fitness Center ceiling

Advantages

Made from waste material and has a texture
It is unique and waterproof
100% termite proof and does not splinter
It is a good heat and sound insulation

☑ TEXCA and CERA Precast Walls

Advantages of TEXCA and CERA Walls

TEXCA

Thai Expanded Clay Aggregate

TEXCA aggregate possesses unique properties such as:

- Light weight
- High strength,
- Thermal insulation
- Sound absorption
- Fire resistance

☑ Eco-Laminates for Built-in

Quality laminates and veneers with certification of low emissions and green labeled

Product certified for low chemical emissions

Environmentally preferred laminate

☑ Selection of materials and resources for Environmentally friendly construction

TOA paint is LEED v4 certified.

Used on foundation, ceiling and interior

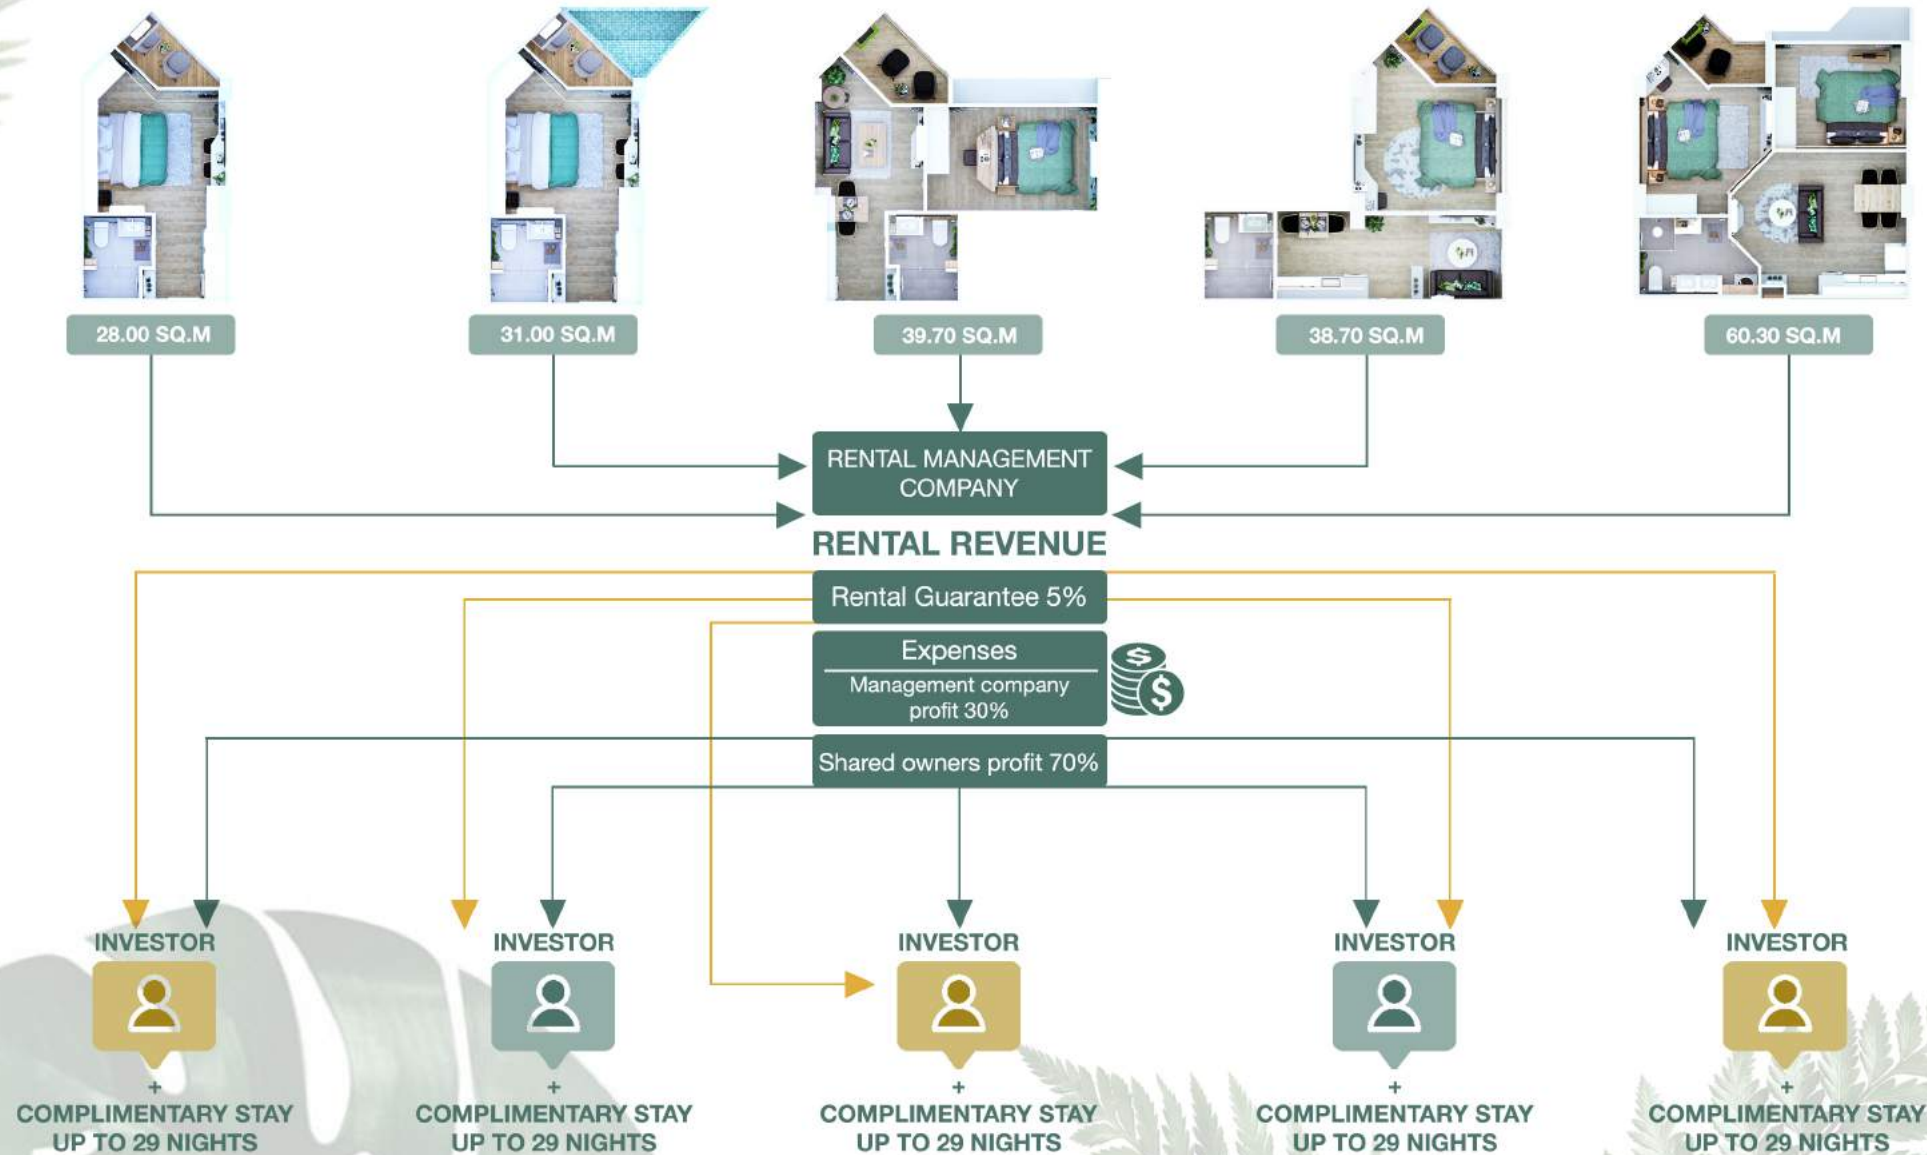

Green tones of the interior

Green comfortable tones in harmony with nature and has a calming effect

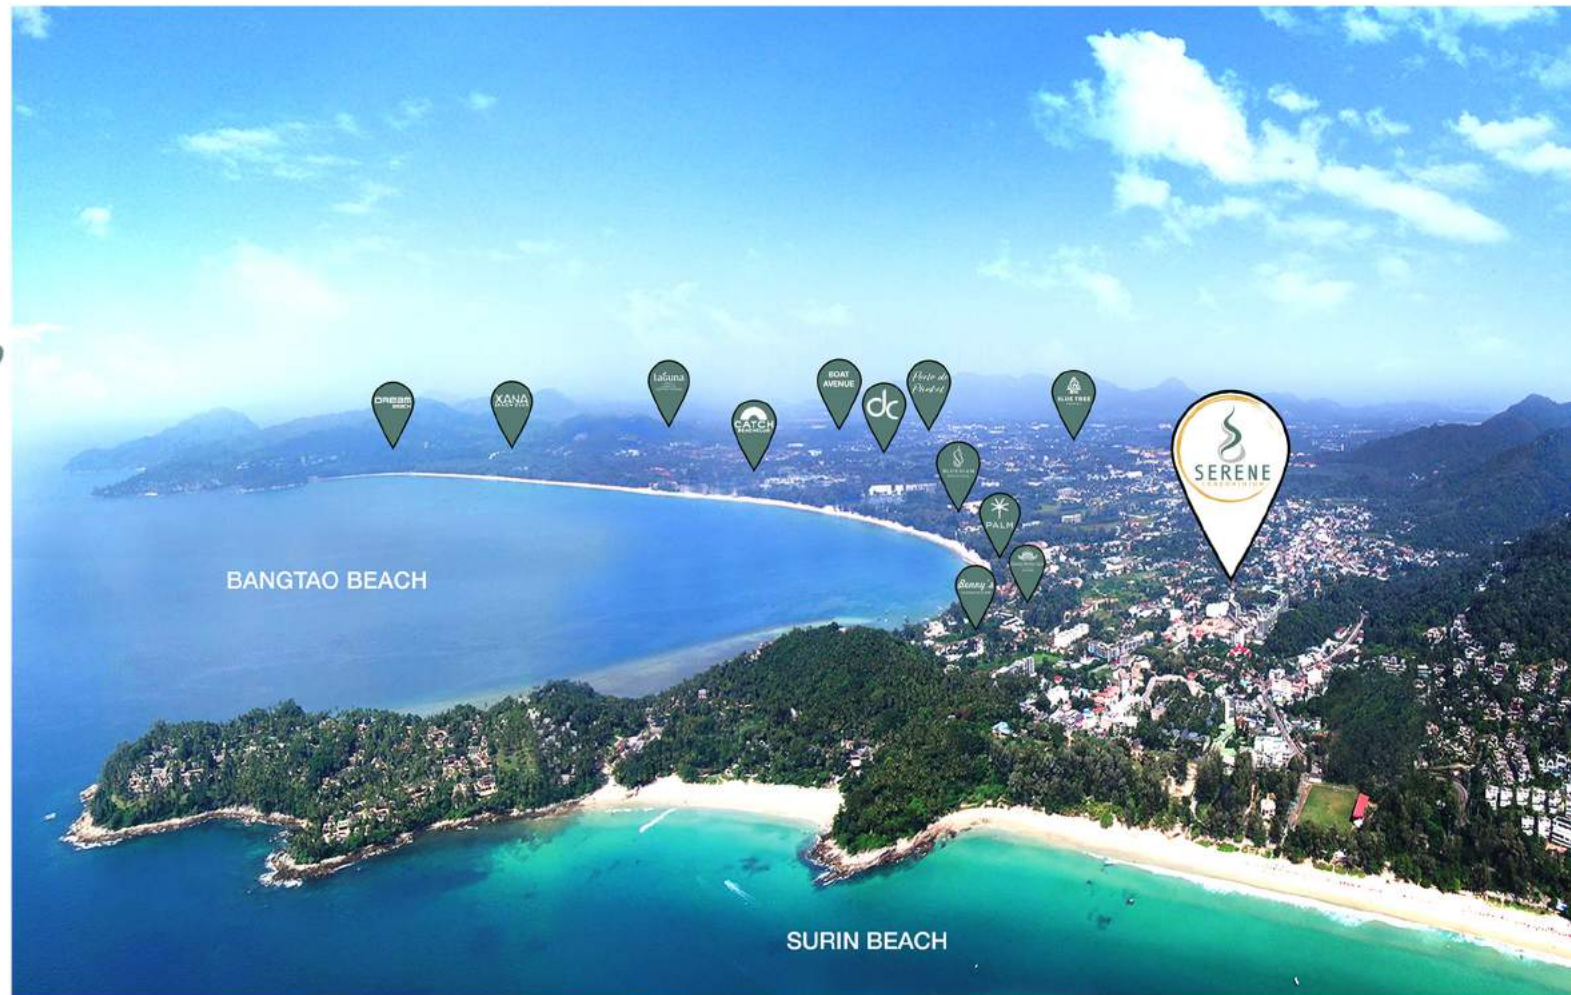

UNLIMITED RENTAL RETURN

Each of the participants in the program is added to the rental system and rented out by the management company.
